

Beautiful beetles

Beetles can be an amazing variety of shapes, sizes and colours, from tiny spotty red ladybirds, to huge beetles with horns and antlers.

Colourful critters

Colour in all these wonderfully patterned beetles, using the outline colours as a guide.

Jewel beetle

Longhorn beetle

Rainbow jewel beetle

Palmetto weevil

Rainbow stag beetle

Golden green stag beetle

Ladybird spots

Different types of ladybirds have different spots and patterns on their backs. Can you pick out three identical pairs among the ladybirds here?

Largest, smallest

Even though they're insects, some beetles can be huge. Read the descriptions of these big beetles, then number them from largest (1) to smallest (5).

Acteon beetles are bigger than hercules beetles, but smaller than rhinoceros beetles.

A giraffe stag beetle is smaller than a hercules beetle.

A hercules beetle is as big as an adult's hand.

Rhinoceros beetles are larger than hercules beetles, but smaller than titan beetles.

Titan beetles are bigger than hercules beetles.
