

# What is it equal to?

The mice need the same number of apples on each side to balance the see-saw. Count the apples and trace the numbers in the boxes.

The mice have added 2 more apples to make the see-saw balance.

= 8 apples add 2 apples equals 10 apples. Instead of writing words to show the amounts are the same, you can just use the equals sign. Olly is pointing to it.

Now the mice are putting apples, acorns and stones on the see-saws. Draw more things to make them balance and then fill in the boxes.
