

# Subtracting fractions

The mice are using pieces of cheese to practise fractions. Can you help them? There's room on this plate for 10 pieces. Draw 7 pieces of holey cheese on the plate.

I'm going to eat 2 of those pieces of cheese!

Now wipe away 2 pieces.

Fill in the empty box to show the fraction of the plate that is still covered by cheese.

$$\frac{7}{10} - \frac{2}{10} = \frac{\quad}{10}$$

Trace these fractions and fill in the empty boxes. You could draw and wipe away pieces of cheese on the plates to help you.

$$\frac{\begin{array}{c} 2 \\ \hline 4 \end{array}} - \frac{\begin{array}{c} 1 \\ \hline 4 \end{array}} = \frac{\quad}{\quad}$$

$$\frac{\begin{array}{c} 5 \\ \hline 6 \end{array}} - \frac{\begin{array}{c} 4 \\ \hline 6 \end{array}} = \frac{\quad}{\quad}$$

I'm sooo full!
