

# What's out in Space?

It looks empty, but there are lots of things in Space. There are planets, rocks, storms and stars...

There are millions and millions of stars. Can you spot six more like this one?

dust, ice and rocks

Some planets have rings around them. Colour this planet.

strong winds

There are huge storms on this planet.

This is a nebula, where new stars are born. Can you find a way to the star in the middle?

Start here.

Lots of stars move around in pairs. Find all the pairs and draw faces on them.

huge cloud of gas and dust

Asteroids are big chunks of rock, travelling through Space. See if you can find five more like this one.
