

Today we are going to talk about something very important.

Can you guess what it is?

All of these come from it.

Many medicines come  
from it too!

You can find it all  
over the world.

It covers the land.

It gives our food the nutrients we need to grow and stay well.

# Mud!

Also known as soil.

# What is soil made of?

Healthy soil has  
three main  
ingredients.

**SAVE  
SOIL**

Healthy soil does so much more  
than grow our food...

USBORNE

It does all these things too.

It FILTERS water.  
I'm testing if it works.

It gives a HOME to billions of living things.

USBORNE

Soil also keeps  
our planet  
cooler.

# Here are some ways to keep soil healthy.

PLANT more things!

Grow DIFFERENT plants each year.

Make your own compost...

Explore mud...

Talk about it.

How does a tiny seed grow into a carrot?

With mud, water and sunshine!

Use NATURAL WAYS to control pests.

There's a big global campaign to protect our soil.

It's called Save Soil,  
and we can all be a part of it.

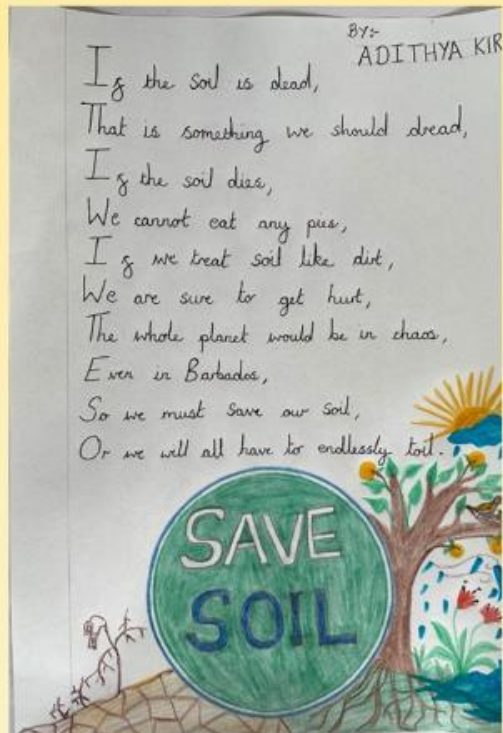

Mud needs our help.

Send letters to leaders,  
write poems and draw pictures.

# What will you do?
